INFO 490 · Team 12 Hestia · Assignment 9 Canvas submission

GitHub repository: https://github.com/HestiaaAI/12_HestiaaAI

1v1 demo time: Thursday, 12 Nov 2026 · 8:30 AM · EDUC 333

Short summary of the AI feature

Ask Hestia (`/tasks/ask/`) lets a signed-in household member ask natural-language questions about shared chores, shopping, tools, maintenance and guest prep. The Django app runs a local RAG pipeline: MiniLM retrieval over the A8 overlapping handbook chunks, then `Qwen/Qwen2-0.5B-Instruct` (previously tested in A6/A7). The page shows the answer, source passages and latency. Empty/oversized input is rejected in the form; out-of-handbook questions abstain instead of inventing rules.

Integrated evaluation improved bathroom-drip reporting after switching to overlap chunking (fully correct Q4). Guardrails pass. A cordless-drill return hallucination remains a documented demo limitation.

Demo cases we will show

1. Success — bathroom tap drip reporting
2. Success — “capital of Australia” abstention
3. Limitation — cordless drill return hallucination
